

DISABLED TOILET ALARM TESTING

Disabled toilet alarms are designed to provide assistance to people with disabilities who may require urgent help while using the restroom. It is crucial to ensure that these alarms are functioning correctly at all times to prevent potential hazards and emergencies.

Monthly function testing of disabled toilet alarms is essential to ensure that the alarm is working correctly and that it will activate if needed. Regular testing can identify any faults or issues with the alarm system and ensure that they are addressed promptly.

Comprehensive annual testing of disabled toilet alarms involves a more thorough inspection of the system to check that all components are in good working condition, including the pull cord, sounder, control panel, and battery. This testing ensures that the alarm system is in compliance with safety regulations and that it will function correctly in an emergency.

We can perform monthly function testing and comprehensive annual testing of your disabled toilet alarm can ensure that your system is working correctly, and any issues are identified and addressed promptly. It also provides peace of mind for those who use the restroom and their caregivers, knowing that the alarm system is reliable and functioning correctly.
